Italian design with building aesthetics in mind.

Maclaren Unicon units neatly slotted into the Premier hotel.

Premier Hotel, a new Kempton Park landmark.

*Urie Shlomo's supply of 327 Maclaren Unicon units to the Premier Hotel Rhodesfield has been implemented with complete success. The client's happiness proves this, as the hotel group has chosen to incorporate these air conditioning units in their East London and Pinetown branches.*

Unicon, a hanging master piece.

For special rooms, these units had to have mounted louvers to accommodate for ducting.

Double core holes from each room keep exteriors clean and classy.

SITUATED NEAR O.R. Tambo International Airport, Premier Hotel Rhodesfield has been re-branded and positioned a five star experience. Along with this, the air conditioning units were required to blend in with the hotel's modern aesthetics, guarantee clean air, maintain a constant ideal climate and, operate silently. Maclaren went over and above what split-units have always divided and provided a single HVAC body that has no need for an outside unit.

Installed neatly into each of the new hotel rooms, the only requirement from the unit is that two holes be cored for a 160mm pipe intake and a 150mm pipe discharge. The external walls only hold two round louvers covering these two pipe leadings. The new Premier Hotel Rhodesfield, with refreshed outside look, benefited from the easy four month installation time as phase one could open in time for the Soccer World Cup. Charged with hydrofluorocarbon (HFC) R410A refrigerant gas, Premier Hotel proves it taking the environmentally conscious route seriously.

Powered with heat pump technology, Maclaren Unicon units can be installed without drain pipes, therefore leading to the considerable savings the 10500 BTU units provide. Aesthetically pleasing and only 23cm, the slender Unicon units are saving hotel room space, adding to guest comfort with remote control technology and, can be fitted against both high and glass walls.
